B.ENG. AND M.ENG. EXAMINATIONS 2012

PART I : MATHEMATICS 2 (ELECTRICAL AND INFORMATION SYSTEMS ENGINEERING)

Date Friday 8th June 2012 10.00 - 12.00

DO NOT OPEN THIS PAPER UNTIL THE INVIGILATOR TELLS YOU TO

Answer Question 1 and THREE of the remaining FIVE questions.

Answer Section A and Section B in different answerbooks.

Question 1 carries twice the marks of each of the other questions.

CALCULATORS MAY **NOT** BE USED.

A mathematical formulae sheet is provided.

[*Before starting, please make sure that the paper is complete; there should be 6 pages, with a total of SIX questions. Ask the invigilator for a replacement if your copy is faulty.*]

SECTION A

1. (i) Find the angle between the vectors $\boldsymbol{a} = (1,\, 2,\, 3),\ \boldsymbol{b} = (2,\, 0,\, 4)$.

(ii) Find the value of the constant λ, such that

$$(y\,\cos x + \lambda\,\cos y)\,dx \;+\; (x\,\sin y + \sin x + y)\,dy$$

is the exact differential of a function $f(x,\, y)$. Find the corresponding function $f(x,\, y)$ subject to $f(0,\, 1) = 0$.

(iii) If the universal set Ω is the set of all positive integers less than or equal to 32 and

$$A = \{\, N \in \Omega \;:\; 1 \le N \le 10 \,\}$$

$$B = \{\, N \in \Omega \;:\; N \text{ even and } N \le 20 \,\}$$

find:

(a) $\overline{A}$, (b) $\overline{A \cup B}$, (c) $\overline{A} \cap \overline{B}$, (d) $\overline{A \cap B}$.

(iv) If $V = \ln(x^2 + y^2)$, prove that

$$\frac{\partial^2 V}{\partial x^2} + \frac{\partial^2 V}{\partial y^2} = 0\,.$$

(v) For what values of k are the equations

$$\begin{aligned} x &+ y - k = 0\,, \\ kx &- 3y + 11 = 0\,, \\ 2x &+ 4y - 8 = 0\,, \end{aligned}$$

consistent?

(vi) By means of a 'truth' table show that $p \to q$ and $\overline{q} \to \overline{p}$ are equivalent.

Q1 CONTINUES ON THE NEXT PAGE

(vii) Define what is meant by an even and an odd function of x.
A function of x, $f(x)$, is periodic with period 2π and satisfies

$$f(x) \;=\; \begin{cases} -1\,, & -\pi \;<\; x \;<\; 0\,, \\ \;\;1\,, & \;\;\;0 \;<\; x \;<\; \pi\,. \end{cases}$$

Sketch the function and find its Fourier series.

(viii) Find the perpendicular distance from the origin to the plane through the points

$$(1,\,1,\,1),\quad (2,\,2,\,3),\quad (1,\,3,\,4)\;.$$

(ix) Obtain the Taylor series expansion of the function $f = \sin(xy)$ about the point $(x,\,y) = (1,\,\pi/3)$ neglecting terms of degree three and higher.

(x) Find the inverse of the matrix $A \;=\; \begin{pmatrix} 1 & 2 & 3 \\ 4 & 1 & 5 \\ 6 & 0 & 2 \end{pmatrix}$.

SECTION B

2. Find the dimensions of a rectangular box of maximum capacity given the box has no top and has surface area 108m^2.

3. The function $f(x)$ is defined by

$$f(x) = \begin{cases} -x\ , & -\pi < x \le 0 \\ 0\ , & 0 < x < \pi \end{cases}$$

and $f(x + 2\pi) = f(x)$.

(i) Sketch the function in the range $-2\pi \le x \le 2\pi$.

(ii) Show that the Fourier series of $f(x)$ is

$$f(x) = \frac{\pi}{4} - \frac{2}{\pi} \sum_{m=0}^{\infty} \frac{\cos(2m+1)x}{(2m+1)^2} + \sum_{m=1}^{\infty} \frac{(-1)^n \sin nx}{n} .$$

What does the Fourier series converge to at $x = \pm\pi$?

(iii) By suitable choice of x evaluate

(a) $\displaystyle\sum_{m=0}^{\infty} \frac{(-1)^m}{2m+1}$.

(b) $\displaystyle\sum_{m=0}^{\infty} \frac{1}{(2m+1)^2}$.

PLEASE TURN OVER

4. $u = x^n f(z)$ when f is any differentiable function of $z = y/x$ and n is a constant.

   (i) Show that $x \dfrac{\partial u}{\partial x} + y \dfrac{\partial u}{\partial y} = nu$. (1)

   (ii) Hence show that $x \dfrac{\partial^2 u}{\partial x^2} + (x+y) \dfrac{\partial^2 u}{\partial x \, \partial y} + y \dfrac{p^2 u}{\partial y^2} = (n-1) \left(\dfrac{\partial u}{\partial x} + \dfrac{\partial u}{\partial y} \right)$.

   (iii) Verify the result (ii) for $n = 2,\ f(z) = z$.

   (iv) By writing (1) in the form

$$\left(x \frac{\partial}{\partial x} + y \frac{\partial}{\partial y} \right) u = nu$$

   or otherwise show also that

$$x \frac{\partial u}{\partial x} + y \frac{\partial u}{\partial y} + x^2 \frac{\partial^2 u}{\partial x^2} + 2xy \frac{\partial^2 u}{\partial x \, \partial y} + y^2 \frac{\partial^2 u}{\partial y^2} = n^2 u \ .$$

5. Find a unit vector in the same direction as the vector $\boldsymbol{a} = 4\boldsymbol{i} - 2\boldsymbol{j} + 4\boldsymbol{k}$ and another unit vector in the same direction as $\boldsymbol{b} = -4\boldsymbol{i} + 3\boldsymbol{k}$.

   (i) Show that the sum of these unit vectors bisects the angle between $\boldsymbol{a}$ and $\boldsymbol{b}$.

   (ii) Find a unit vector $\widehat{\boldsymbol{t}}$ which is normal to $\boldsymbol{a}$ and $\boldsymbol{b}$.

   (iii) Finally find the volume of the parallelepiped whose edges correspond to the three unit vectors defined above.

6. (i) Use Mathematical Induction to show that

$$1 + 2 + 3 + \ldots + N = \frac{1}{2} N.(N+1) ,$$

for any natural number N.

(ii) Let A, B and C be the following propositions:

A : it is raining;

B : the sun is shining;

C : there are clouds in the sky.

(a) Translate the following English sentences into logical expressions:

i If it is raining then there are clouds in the sky;

ii If there are no clouds in the sky then the sun is shining.

(b) Translate the following logical expressions into English sentences:

i $(A \cap B) \rightarrow C$;

ii $\overline{A} \rightarrow (B \cup C)$.

(iii) State the truth table for $(A \rightarrow B) \cup (B \rightarrow A)$, $(A \rightarrow B) \cap (B \rightarrow A)$ and $(A \leftrightarrow B)$.

Which two of these three logical expressions are equivalent?

a) By definition of dot product $\underline{a}\cdot\underline{b} = |\underline{a}||\underline{b}|\cos\theta$ — 1

$= a_1 b_1 + a_2 b_2 + a_3 b_3$

$|a| = \sqrt{1^2+2^2+3^2} = \sqrt{14}$, $|\underline{b}| = \sqrt{4+16} = \sqrt{20}$ — 1

$\therefore\ \underline{a}\cdot\underline{b} = 2+0+12 = \sqrt{14}\sqrt{20}\cos\theta$ — 1

$\theta = \cos^{-1}\sqrt{\frac{7}{10}}$. — 1

b) Exact if $\frac{\partial}{\partial y}(y\cos x + \lambda\cos y) = \frac{\partial}{\partial x}(x\sin y + \sin x + y)$ — 1

ie $\cos x - \lambda\sin y = \sin y + \cos x$ — 1

$\therefore\ \lambda = -1$

$\frac{\partial f}{\partial x} = y\cos x + \lambda\cos y \Rightarrow f = y\sin x - x\cos y + A(y)$ — 1

then $\frac{\partial f}{\partial y} = \sin x + x\sin y + A'(y) = x\sin y + \sin x + y$

$\therefore\ A = y^2/2 + \text{constant}$

$\therefore\ f = y\sin x - x\cos y + y^2/2 + \text{constant}$

c If dimensions of box are x, y, z we require maximum of xyz subject to

$$xy + 2xz + 2yz = 108 \qquad (1)$$

Auxillary function is $\phi = xyz + \lambda(xy + 2xz + 2yz) - \lambda.108$ 2

$\therefore$ require 2

$$\phi_x = yz + \lambda(y + 2z) = 0 \qquad (2)$$ 2

$$\phi_y = xz + \lambda(x + 2z) = 0 \qquad (3)$$ 2

$$\phi_z = xy + \lambda(2x + 2y) = 0 \qquad (4)$$

Now solve (1), (2), (3) & (4).

$(x)(2) + (y)(3) + (z)(4)$ gives $3xyz + \lambda(2xy + 4xz + 4yz) = 0$ 2

ie $\lambda(xy + 2xz + 2yz) + \frac{3}{2}xyz = 0$

$\therefore 108\lambda + \frac{3}{2}xyz = 0 \Rightarrow \lambda = \frac{-xyz}{72}$ 2

$\therefore 1 - \frac{x}{72}(y + 2z) = 0$

$1 - \frac{y}{72}(x + 2z) = 0$

$1 - \frac{z}{72}(2x + 2y) = 0$

$\therefore \frac{yz}{36} - \frac{xz}{36} = 0 \Rightarrow x = y \quad (z \neq 0)$ 4

$\therefore 1 - \frac{yz}{18} = 0 \Rightarrow yz = 18$ 2
