Solutions Some int 3 for (i=0; i <= n; i+1) {

nesult = result + n;

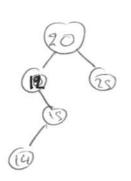

veturn result; (si) [6] int calculate FR (int n) } if $(u==\varphi)$ return φ ;
else
return calculate fR(n-1)+n;

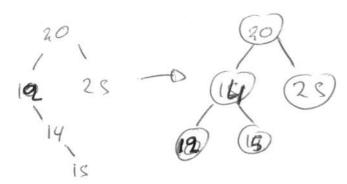

ii) The tree in part (i) is balanced as all the BFs are within the range (=1,1].

iii)

iv) The tree is not balanced. Possility free.

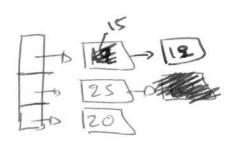

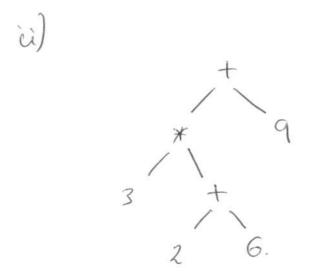

(double rotation).

(V)

9

vi)

9 = xp1 : (assigns a randon number.

$$x = 2 \cdot x$$

 $y = xp_2 = 2 \cdot x$

memory leads at p1=9x.
